SeaCatch™

WIRELESS VIDEO SECURITY

Intrusion Detection for
Cabins, Remote Sites
and Temporary Applications

**SEACOAST
SECURITY**

Security Where You Need It—Without Phone or Electrical Connections

For decades, two security problems have defied solution: how to protect remote locations without electrical power or phone connections, and how to protect assets that aren't always in the same place.

Finally, there's a practical, economical solution: The SeaCatch Wireless Video Security System. It's battery powered and communicates through GSM like your cell phone. It can operate off the grid in remote locations and in extreme temperatures to -20°F. Compact, portable and easy to set up, the SeaCatch system is ideal for movable assets and temporary installations.

SeaCatch Excels in Remote Locations and Vacant Areas

Seasonal Summer Homes, Cabins and Camps

When you close up your cabin you can now have a security system to protect your valuable assets without having to leave the phone service and heat on all winter long.

Construction Sites

If you store your construction equipment in the front of the job site one day and need to move it to the rear the next, just move the SeaCatch motion viewer to the area you need to protect.

Boats and RVs

Keep your boat docked while you're away and rest assured that no one will board without SeaCatch letting you know.

Vacant Properties and Storage Sheds

Don't be concerned about vandals entering your vacant building. Put up a SeaCatch motion viewer and be alerted whenever anyone enters the property.

Storage Yards, Depots, Vehicle and Retail Lots

If you're tired of putting your product displays out and taking them in each day, a SeaCatch motion viewer will watch over your products both night and day, alerting you to any intrusion. SeaCatch's video feed will provide the evidence the police need to make an arrest.

Simple and Sophisticated

The SeaCatch™ Wireless Video Security System is so simple to set up that you can easily move it around to suit your needs. No hard wiring or networking—just two main components that can be mounted almost anywhere.

Motion viewers combine a passive infrared motion sensor, a digital video camera and infrared illuminators into a single compact wireless battery powered device that is available for both indoor and outdoor applications.

The control panel can receive video from up to 25 motion viewers and will transmit a 10 second clip to the Seacoast security monitoring center over GSM or internet. The battery life is between 1-4 years based on the application and usage.

Accessories can be added to expand the functionality of SeaCatch. You can add door/window contacts, proximity card readers, siren, strobes, keypads, and external antennas to boost the signal when needed.

Easy Installation Options

Because the system is wireless, SeaCatch components can be mounted and installed almost anywhere. The motion viewer can be placed on interior or exterior walls, fences, and dock pilings and even in a tree.

What if someone tries to disable or damage the motion viewer? By that time we already have their picture and the police have been notified.

The “bucket cam” is a quick solution for construction sites or temporary applications. Place a pole in a 5-gallon bucket filled with concrete and mount a couple motion viewers back to back on the pole. Now you can move the bucket cam to protect the area you need to. There’s no need to move the assets you want to protect—bring the security to them.

Frames from actual SeaCatch video clips

Don't Just Document the Crime—Stop It!

When an intrusion occurs, SeaCatch sends a brief, real time video clip to the Seacoast Security 24/7 monitoring center. One of our trained monitoring dispatchers will view the clip and determine the cause of the intrusion and then will take the appropriate action. Because we can see what caused the alarm activation, false alarms are virtually eliminated.

We can also have the clip sent to your email at the same time we are viewing it so you can be aware of what we are seeing.

SeaCatch was purposely engineered to produce a relatively low-resolution video image that can be quickly transmitted over the GSM network. This is *not* a surveillance system—it is intrusion detection and verification to stop the crime and apprehend the intruders. SeaCatch is so effective it is endorsed by the National Sheriff's Association.

RF RANGE EXPECTATIONS (915 MHz)*

APPLICATION	RANGE (feet)
Line-of-sight	500-1000
Outdoor	300-500
Commercial building	100-200
Residential building	100-300
Lab rating	2000

* These numbers are estimates. RF signals vary by environment. Test RF signal using demo kit whenever possible.

BATTERY LIFE EXPECTATIONS*

APPLICATION	YEARS
Outdoor uncontrolled	Up to 1
Outdoor controlled	1-2
Indoor + outdoor	1-2
Indoor	2-3
Maximum	4

* These numbers are estimates. Battery life is based on amount of events transmitted by the panel.

SYSTEM FEATURES

- ✓ Integrated IP Ethernet + GPRS modems
- ✓ No AC power required (GPRS only)
- ✓ Completely wireless
- ✓ Infrared illumination (up to 30 ft.)
- ✓ Full-RF supervision
- ✓ Military-grade RF
- ✓ Up to 19 user codes / badges
- ✓ Auto arm / disarm on 7-day schedule
- ✓ Opening / closing reports by user
- ✓ Exit / entry delays
- ✓ Tamper alerts
